### **DETAILED ACTION**

Claims 1-42 are pending in the present application.

#### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, drawn to a method of assembling a tissue engineered construct, classified in class 435, subclass 395.
- II. Claims 22-26, drawn to a method of facilitating regeneration of cartilage, classified in class 514, subclass 44.
- III. Claims 27-42, drawn to a transfection vector and transfected cells, classified in class 435, subclass 320.1 and class 435, subclass 325.

The inventions are distinct, each from the other because of the following reasons:

According to MPEP 803.01 restriction is proper between patentably distinct inventions where the inventions are: (1) The inventions must be independent (see MPEP § 802.01, § 806.04, § 808.01) or distinct as claimed (see MPEP § 806.05 - § 806.05(i)); and (2) There must be a serious burden on the examiner if restriction is required (see MPEP § 803.02, § 806.04(a) - § 806.04(i), § 808.01(a), and § 808.02). In the instant case the different inventions each of the Groups comprises different methods with different method steps or different products. The method and construct of Group I differ than the method of facilitating regeneration of collagen of Group II. The method of Group II is drawn to a type of transplantation or replacement of cartilage presumably for the possible repair of damaged ligaments or tendons. On the other hand, the method of Group I is drawn to a method of assembling a support for the growth of

Art Unit: 1636

several different cell types and is not specifically drawn to the regeneration of cartilage. Also, Group III differs from either of the methods of Group I or Group II because it is specifically drawn to a transfection vector and transfected cells. These are products and not methods. They also have specific functions and characteristics not related to the products produced by either of the methods of Group I or Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Moreover, the search required for Group I is not required for Group II or Group III thus rendering restriction proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
